EOL notification. 2*.542 configuration for USB3.1 is discontinued.

At the end of 2022 LEMO launched a dedicated USB3.1 contact insert size 2 for the series of the Originals family. This product is very well designed and engineered and delivers the promised high-speed performance of up to 10 Gbps.

Although this product started to have a certain interest in the market, it has two important drawbacks:

1) size 2 is often considered too big (compared to competitive offerings)

2) the cable assembly for this solution is very complicated and time-consuming.

To solve these two issues, LEMO has developed an equally performant USB 3.2 (10Gbps) solution in a size 1 which is a more competitive size, and it does not add any constraints on cable assembly.

For any new Design-in of a USB3.2 solution, please use this new configuration which is already available in the recently launched D series (1D.U32) and it will also be available in the B series (1B.U32) starting

June 2026.

EOL: For existing customers, production of this configuration is available until the end of 2026.

LTB: ongoing with existing customers

With best regards,
