General Description of Changes
TE Connectivity is implementing a tooling change related to the manufacturing of the affected part numbers. Specifically, a duplicate tool has been introduced, resulting in two tools now being used to produce the same part numbers. Both tools operate under the same process controls, qualification standards, and quality systems. The updated tooling configuration has been evaluated and validated according to TE's standard qualification procedures to ensure consistent product performance and quality across both tools. There is no change to the product's form, fit, or function, and the parts remain fully compliant with existing specifications. Parts produced from either tool are fully interchangeable.

Reason for Changes:
This change is being implemented to improve manufacturing efficiency, increase production capacity, and enhance overall process robustness while maintaining product quality and reliability.
